

Faculty of Computers & Artificial Intelligence
2st Term (2019-2020) Resit & Deferral Exam
Class: 2nd Year Students
Course Code: CSW251
Course name: Object Oriented Programming

Benha University
Final Date: 7 / 6 /2020
Total Marks: Pass / Fail
Examiner(s): Dr. Ahmed Taha

Research submission: From 31 May to 7 June 2020

Based on your study in the Object-Oriented Programming (OOP) course,

- **A research project is required for each student separately. No student is allowed to participate in the research within a group of students.**
- **The project must cover the major aspects of OOP design including abstraction, encapsulation, inheritance, polymorphism, function overloading, function overriding, and should be implementable in C++.**
- **Student must plan and implement a multiple-class, fully functioning application in C++.**
- **Successful projects will have a clear inheritance hierarchy, and demonstrate concepts learned during the course.**
- **The project will be evaluated on how it fulfills the requirements and the quality / completion of the code.**
- **A project must represent the student's sole effort; online tutorials or other examples may be consulted, but they must be improved upon and noted in the final documentation. Failure to note and provide links to reference material will be considered cheating.**
- **Academic dishonesty of any kind will not be tolerated**

Notes: please, your research must contain the following elements:

- 1. Project idea**
- 2. A diagram for the classes involved and the attributes of each class**

3. Project implementation identifying the concepts that each code segment implements as a comment

For example:

```
//Inheritance
class A: public class B
{
    ...
}
```

4. Conclusion

GOOD LUCK,

Examiner(s)
